European Technical Assessment

ETA 23/0551 of 13/07/2023

Technical Assessment Body issuing the ETA: Technical and Test Institute for Construction Prague	
Trade name of the construction product	MO-PUS
Product family to which the construction product belongs	Product area code: 33 Injection anchors for use in masonry
Manufacturer	Index Técnicas Expansivas, S.L. P.I. La Portalada II C. Segador 13 26006 Logroño Spain https://www.indexfix.com/
Manufacturing plant(s)	Index Plant 1
This European Technical Assessment contains	14 pages including 11 Annexes which form an integral part of this assessment.
This European Technical Assessment is issued in accordance with regulation (EU) No 305/2011, on the basis of	EAD 330076-01-0604 Metal injection anchors for use in masonry

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (excepted the confidential Annex(es) referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

1. Technical description of the product

The MO-PUS for masonry is a bonded anchor consisting of a cartridge with injection mortar, a plastic sieve sleeve and an anchor rod with hexagon nut and washer. The steel elements are made of galvanized steel or stainless steel.

The sieve sleeve is pushed into a drilled hole and filled with injection mortar before the anchor rod is placed in the sieve sleeve. The installation of the anchor rod in solid masonry can be also done without a sieve sleeve. The steel element is anchored via the bond between metal part, injection mortar and masonry.

The illustration and the description of the product are given in Annex A.

2. Specification of the intended use in accordance with the applicable EAD

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the products in relation to the expected economically reasonable working life of the works.

3. Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance for tension and shear loads	See Annex C 1
Reduction factor for job site tests (β – factor)	See Annex C 1
Edge distances and spacing	See Annex B 6
Displacement under shear and tension loads	See Annex C 1
Durability	See Annex A 3

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1

3.3 Hygiene, health and environment (BWR 3)

No performance determined.

3.4 General aspects relating to fitness for use

Durability and serviceability are only ensured if the specifications of intended use according to Annex B 1 are kept.

4. Assessment and verification of constancy of performance (AVCP) system applied with reference to its legal base

According to the Decision 97/177/EC of the European Commission[1], the system of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) given in the following table applies.

Product	Intended use	Level or class	System
Injection anchors for use in masonry	For fixing and/or supporting to masonry, structural elements (which contributes to the stability of the works) or heavy units	-	1

[1] Official Journal of the European Communities L 073 of 14.03.1997

5. Technical details necessary for the implementation of the AVCP system, as provided in the applicable EAD

The factory production control shall be in accordance with the control plan which is a part of the technical documentation of this European Technical Assessment. The control plan is laid down in the context of the factory production control system operated by the manufacturer and deposited at Technical and Test Institute for Construction Prague [2]. The results of the factory production control shall be recorded and evaluated in accordance with the provisions of the control plan.

Issued in Prague on 13.07.2023

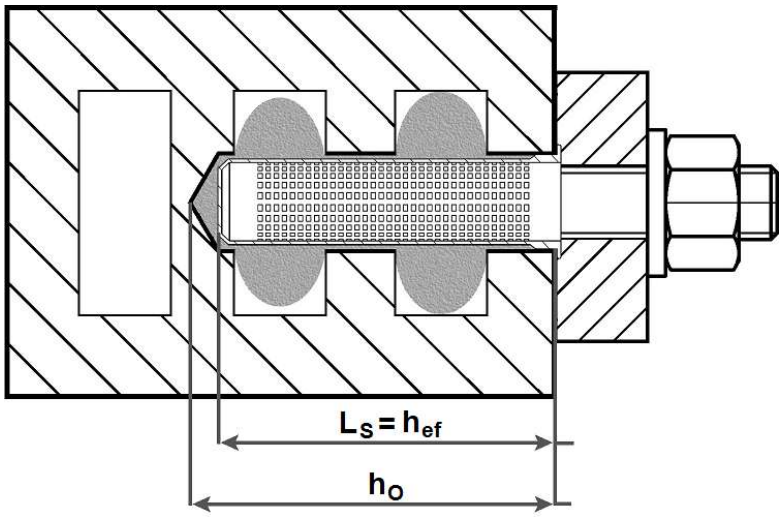
By

Ing. Jiří Studnička, Ph.D.
Head of the Technical Assessment Body

[2] The control plan is a confidential part of the documentation of the European technical assessment, but not published together with the ETA and only handed over to the approved body involved in the procedure of AVCP.

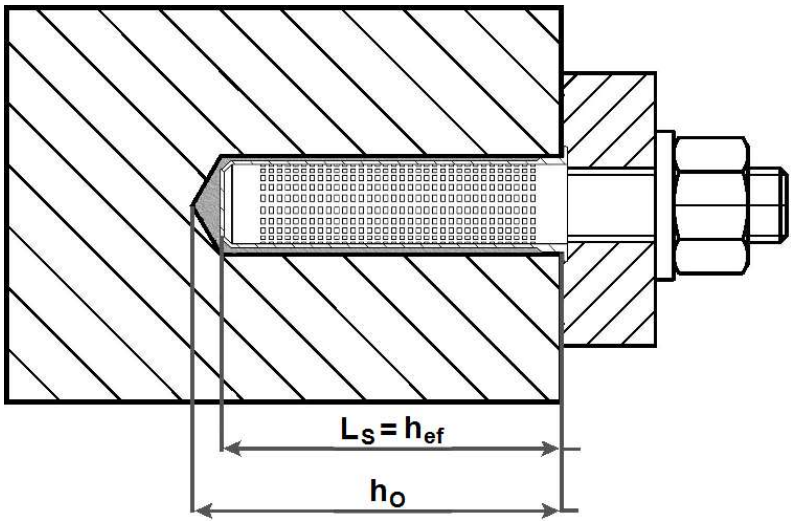
Installation in hollow or perforated brick masonry

Installation of anchor rod with sieve sleeve



Installation in solid brick masonry

Installation of anchor rod with or without sieve sleeve



L_s = length of the sieve sleeve

h_{ef} = effective setting depth

h_0 = bore hole depth

SH15/85
SH16/85
SH20/85

Designation	Material
Sieve sleeve	Polypropylene

MO-PUS for masonry	**Annex A 4**
Product description Sleeve	

Specifications of intended use

Anchorages subject to:
- Static and quasi-static loads

Base materials
- Solid brick masonry (Masonry group b), according to Annex B2.
- Hollow brick masonry (Masonry group c), according to Annex B2 to B3.
- Mortar strength class of the masonry M2,5 at minimum according to EN 998-2:2010.
- For other bricks in solid masonry and in hollow or perforated masonry, the characteristic resistance of the anchorages may be determined by job site tests according to EOTA Technical Report TR 053 and under consideration of the β-factor to Annex C1, Table C4.

Note: The characteristic resistance for solid bricks are also valid for larger brick sizes and larger compressive strength of the masonry unit.

Temperature range:
- **T**: -40°C to +80°C (max. short. term temperature +80°C and max. long term temperature +50°C)

Use conditions (Environmental conditions)
- (X1) Structures subject to dry internal conditions (zinc coated steel)

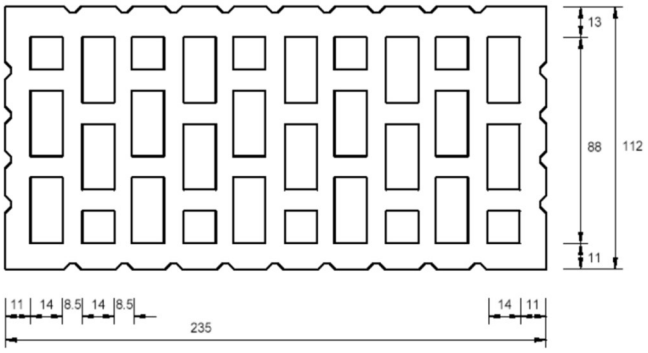
Use conditions in respect of installation and use:
- Category d/d - Installation and use in structures subject to dry, internal conditions
- Category w/d - Installation in dry or wet substrate and use in structures subject to dry, internal conditions

Design:
- Verifiable calculation notes and drawings are prepared taking account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings.
- The anchorage are designed in accordance with the EOTA Technical Report TR 054, Design method A,, under the responsibility of an engineer experienced in anchorages and masonry work.

Installation:
- Dry or wet structures
- Anchor Installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

Table B1: Types and dimensions of block and bricks

Brick N° 1



Hollow clay brick HLz 12-1,0-2DF
according to EN 771-1
length/width/height = 235 mm/112 mm/115 mm
$f_b \geq 12$ N/mm^2 / $\rho \geq 1{,}0$ kg/dm^3

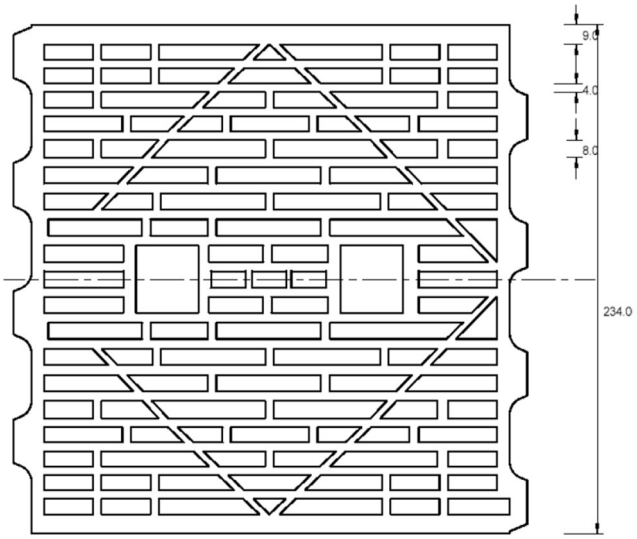
Brick N° 2

Solid clay brick Mz 12-2,0-NF
according to EN 771-1
length/width/height = 240 mm/116 mm/71 mm
$f_b \geq 12$ N/mm^2 / $\rho \geq 2{,}0$ kg/dm^3

Brick N° 3

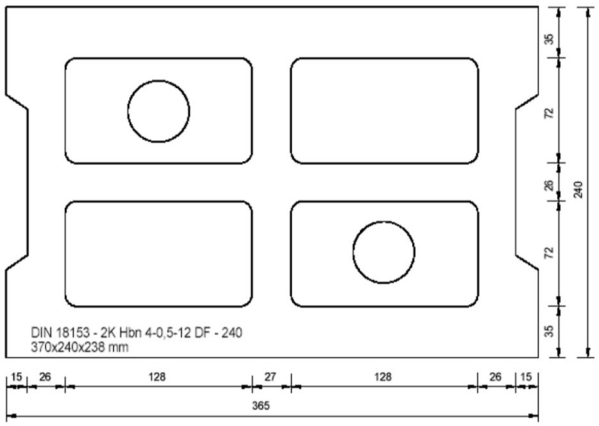
Solid sand lime brick KS 12-2,0-NF
according to EN 771-2
length/width/height = 240 mm/115 mm/70 mm
$f_b \geq 12$ N/mm^2 / $\rho \geq 2{,}0$ kg/dm^3

Brick N° 4



Hollow clay brick HLzW 6-0,7-8DF
according to EN 771-1
length/width/height = 250 mm/240 mm/240 mm
$f_b \geq 6$ N/mm^2 / $\rho \geq 0{,}8$ kg/dm^3

Brick N° 5



Concrete masonry unit Hbn 4-12DF
according to EN 771-3
length/width/height = 370 mm/240 mm/238 mm
$f_b \geq 4$ N/mm^2 / $\rho \geq 1{,}2$ kg/dm^3

Annex B 4

Installation instructions

	**1.** Drill the hole to the correct diameter and depth using a rotary percussive machine.		**2.** Use the cleaning pump to clean the hole.
	**3.** Use the cleaning brush to clean the hole. Diameter of Cleaning brush according to Table B4.		**4.** Use the cleaning pump to clean the hole.
	**5.** Use the cleaning brush to clean the hole. Diameter of Cleaning brush according to Table B4.		**6.** Use the cleaning pump to clean the hole.
	**7.** If used in hollow or perforated brick masonry: Plug the centering cap and insert the correct perforated sleeve flush with the surface of the base material.		**8.** Once the hole is prepared, remove the screw cap from the cartridge.
	**9**. Attach the mixer nozzle and place the cartridge in the applicator gun.		**10.** Dispense the first part to waste, until an even colour is achieved.
	**11.** Remove any remaining water from the hole.		**12.** Insert the nozzle to the far end of the hole (using extension tubing if necessary) and inject the resin, withdrawing the nozzle/tube as the hole fills.
	**13.** If used in hollow or perforated brick masonry: Insert mixer nozzle to the end of the perforated sleeve and completely fill the sleeve with resin. Withdraw the mixer nozzle as the sleeve fills.		**14.** Immediately insert the fixing (steel element) slowly and with a slight twisting motion. Remove excess resin from around the mouth of the hole.
	**15.** Leave the fixing undisturbed until the cure time (see Table B6) has elapsed.		**16.** Attach the fixture and tighten the nut. Maximum installation torque moment according to Table B6.
