

SELF-TAPPING SCREW FIXINGS

Denomination: **SELF-TAPPING SCREW FIXINGS** Codes: **T81**, **T82**, **T83**, **AUE**, **TCP**, **TFI**.

Reference: FT ROS-en Date: 15/12/15 Revision: 3 Page: 1 of 14

T81

T82

T83

AUE

TCP

TFI

CHARACTERISTICS

- ISO 1478 self-tapping thread.
- Require pre-drilling.
- Point Type F.
- Wide variety of head types, diameters and lengths for different applications: flexibility in installation.
- Zinc-plated or black zinc-plated coatings.
- Stainless steel versions.
- RAL colour scheme versions.
- Coloured caps available for hexagonal heads.

APPLICATIONS

- For fixing metallic elements, or plastic, wood, or other materials to metallic elements.
- Versions with galvanized steel-EPDM washer for sealed joints in façades and roofing.

SELF-TAPPING SCREW FIXINGS

Denomination: **SELF-TAPPING SCREW FIXINGS** Codes: **T81**, **T82**, **T83**, **AUE**, **TCP**, **TFI**.

Reference: FT ROS-en Date: 15/12/15 Revision: 3 Page: 3 of 14

PRE-DRILLING

For the correct installation of self-tapping screws, pre-drilling is to be according to the following table, depending on the base material and the thickness to be fixed (UNE 17020):

Thread	Steel		r brass plate thickness [mm] Aluminium plate thickness [mm]						m]
	0.4 - 0.6	0.6 - 1.5	1.5 - 2.5	2.5 - 4.0	0.4 - 0.6	0.6 - 1.0	1.0 - 1.5	1.5 - 2.5	2.5 - 4.0
ST 2.9	2.25	2.40	2.50		2.20	2.20	2.25	2.40	
ST 3.5	2.70	2.80	2.90	3.00	2.70	2.70	2.80	2.80	
ST 3.9		3.10	3.20	3.30		3.00	3.00	3.10	3.10
ST 4.2		3.30	3.40	3.50		3.20	3.20	3.30	3.30
ST 4.8		3.80	3.90	4.00		3.70	3.70	3.80	3.80
ST 5.5		4.40	4.50	4.60		4.30	4.30	4.40	4.40
ST 6.3		5.10	5.20	5.30		5.00	5.00	5.10	5.10

A pre-drill hole which is too large may cause the base material to strip the thread, or a loose fixing. A pre-drill hole which is too small may make threading the screw impossible, causing it to break or deforming the material to be fixed.

SCREW RESISTANCE CHARACTERISTICS

SZE	TENSION [kN]	SHEAR [kN]
ST 2.9	2.62	1.31
ST 3.5	3.81	1.91
ST 3.9	4.64	2.32
ST 4.2	5.26	2.63
ST 4.8	7.11	3.56
ST 5.5	9.63	4.82
ST 6.3	13.36	6.68

1 KN ≈ 100 Kg

For tension loads, the inherent resistance of plates to be fixed must be taken into account, which is usually less than the resistance of the screw itself, as the screw will probably tear the plates.

SELF-TAPPING SCREW FIXINGS

- Zinc-plated (code AUE) finish.
- Similar geometry to DIN 6928, with reinforced embossed washer:
 - o better torque transmission.
 - o better compressive stress distribution on material to be fixed.
 - o more difficult to strip screw.
 - o suitable for fixing soft materials, with large holes or when higher torque is required.
- For general use in metal-metal fixings where higher stress applications are required.
- Versions with ø16 mounted galvanized-EPDM washer, for sealed joints in façades and roofing (consult ARVUL Technical Data Sheet).

- Zinc-plated (code TCPZ), black zinc-plated (code TCPN), or completely white RAL 9010 painted (code TCPB) finishes.
- Version in A2 stainless steel, AISI 304 (code TCPA2).
- Bevelled head to prevent snagging on sliding parts.
- For joints on metal which require a very low head (sliding doors and windows, inlaid locks, etc.).
- May be used as a substitute for rivets in many applications, with the advantage of being removable.
- Reduced cone under head to improve finish on flat surfaces.
- For aluminium fixings, use stainless steel screw.
