

### KFS-FC

### PRODUCT DESCRIPTION

- Cross connector for lateral fixing.

### CHARACTERISTICS

- Pre-assembled kit for lateral fixing of PSE-C profile.
- Includes one profile in 6005-T6 anodised extruded aluminium alloy.
- Includes one DIN-933 bolt, one DIN-127 (M8) washer and one DIN-934 (M8) nut in A2-70 stainless steel.
- For outside use.
- Attachment to the side of PSE-C profiles without interfering with any operations.
- 30 mm-long with a vertical 26.5 mm-wing, designed for a pre-stressed joint that is resistant to torsion on the profile.
- Quick, accessible fixing with a single bolt.
- Facilitates pre-assembly and the adjustment of profiles thanks to its elastic washer.
- Allows dismantling without damaging structural elements, maximum tightening torque: 14 Nm.
- Guide groove on the vertical wing that allows attachment drill holes to be made in the longitudinal joint areas between profiles.

### APPLICATIONS

TPA-R

PSE-C

TPA-C

TPA-A

These are used in **assembled aluminium triangle fixing systems**, to complement the joint between the **TPA-A**, **TPA-C**, and **TPA-R** models “pre-assembled open (A)/closed (C)/adjustable (R) aluminium triangle” and the **PSE-C** “aluminium profile for lateral assembled fixing” as a cross-connector between the two.

The specific design allows a connection between the side walls of the **PSE-C** profile, producing a strong pre-stressed joint without interfering with any profile operations.

Attachment is via a single M8 **DIN-933** bolt (included in the kit) which is introduced into the upper groove of the **TPA** triangles.

APPLICATION EXAMPLE

Application example: mounting on adjustable aluminium triangle.
