COATING		
ASSESSMENT	 for installation on structural steel elements, or on a structural steel element and another non-structural element according to guideline EAD	 for installation on structural steel elements, or on a structural steel element and another non-structural element according to guideline EAD

FEATURES

- Designed to join structural steel elements, or a structural steel element with a non-structural element.
- Suitable for connections in hollow sections, especially when the backside is inaccessible.
- Compatible with rectangular, square, and circular hollow sections.
- Suitable for static or quasi-static loads.
- Easy installation.
- Requires pre-drilling of the elements to be fastened.
- Available in zinc-plated and hot-dip galvanized finishes.

APPLICATIONS

- Fastening of two structural steel elements, or a structural steel element with a non-structural element.
- Ideal for hollow structural sections where the backside is inaccessible.
